CricketIQ

A smarter companion for every match

THE PROBLEM

Cricket fans often need to jump between live score pages, scorecards, player statistics, and commentary to understand a match. That makes it difficult to quickly answer questions like who is scoring fastest or which bowler is taking wickets.

THE SOLUTION

CricketIQ brings live Cricbuzz scores and detailed scorecards into one dashboard. After syncing a match, fans can explore its scorecard, compare players, view innings and batting charts, review fantasy points, and inspect partnerships and fall of wickets. The AI Match Explainer and Ask CricketIQ answer questions using the selected match data, including top run-scorers, leading wicket-takers, and individual player figures. Follow-up questions can refer to players from previous answers. When a statistic is missing from the feed, CricketIQ says it is unavailable instead of making one up.

TOOLS USED

I used Codex as a development tool to build and refine the application, including its Streamlit interface, Apify integration, data handling, and cricket analysis logic. The explainer uses deterministic, scorecard-based logic; the app does not connect to an external generative AI service.

One match. A clearer view of every player, score, and turning point.
